

Product Highlights

Hosting Server Management, Simplified.

cPanel & WHM provides a powerful set of automation tools for server management.

What is cPanel & WHM®?

cPanel & WHM is a suite of tools built for Linux operating systems that gives you the ability to automate web hosting tasks via a simple interface. It removes the complexity of creating advanced server configurations and comes equipped with automatic updates, built-in backups, and all the tools you'll need to get up and running.

cPanel is your website's automation solution, and allows you to do tasks such as edit files, create email addresses, and setup databases.

The cPanel accounts themselves are managed by WHM which is the web host manager. WHM is ideal if you are running your own server (whether a dedicated server or VPS) or when you want to resell web hosting services.

SCALE

Build custom packages for your hosting business and easily scale up or down depending on what you need month-to-month. cPanel lets you set the pace and only pay for what you use.

MONITOR

Understand what's going on across your server environment with our advanced monitoring tools. Track resources and find potential issues before they become a problem.

SECURE

Gear up your machines for top-level security, including encrypted messaging and multi-factor authentication. Deploy SSL certificates quickly and manage IPs by user or by region.

CUSTOMIZE

Engineer your customer's experience to match your company style with cPanel dashboards tailored to your brand. Mix and match add-ons and assemble a custom package to offer them.

AUTOMATE

Handle routine server tasks and put maintenance on cruise control. cPanel APIs automate installations, integrate billing, and administer your customer licenses.

HOSTING SERVER MANAGEMENT

cPanel puts you in the driver's seat with hundreds of built-in features, including database management, supported migrations, dedicated email servers, and comprehensive DNS tools.

Even More Features:

INTEGRATED SECURITY

Imunify AV is included with every license to scan for malware and help you stay in control of securing your server from spam. Integrated upgrades to Imunify AV+ or Imunify 360 automate clean up and give you peace of mind.

GIT™ VERSION CONTROL

Create and manage Git repositories directly from the cPanel interface. View revisions, log information, manipulate files and changes before or after pushes, solve merge conflicts when changes collide, and more.

APPLICATION MANAGER

Take advantage of the Phusion Passenger® web app server to deploy your applications! Register and manage your apps from this easy-to-use interface.

REMOTE BACKUPS

Using WHM's Backup Configuration Interface, configure and store your account backups to a number of remote destinations including Amazon S3™, Google Drive™, FTP, SFTP, WebDAV and more!

SERVER SECURITY

Your servers and customers are protected by security protocols baked into the core, such as cPHulk, ModSecurity®, and Host Access Control, as well as 3rd-party offerings such as KernelCare and Imunify360.

24/7 SUPPORT

Customers and Partners receive 24/7 world-class support.
